Session on Best Teaching Practices
28th July, Wednesday, 11 AM – 12 PM

Talent Decrypt was used in IP and Network Security, and the experience was discussed at length.

- A detailed assessment was done to understand the geography and network capabilities of students. The assessment suggested that a few students had very limited connectivity. However, the TD solution came in handy in conducting the online evaluations. While the logistics was managed by TD, TAs had to do online invigilation.
- It was also mentioned that TD had some unique advantages over Meet like – multiple students sharing the screen as well as resuming from the point where connectivity was lost.
- The solution can also be extended to pen and paper based evaluation.

Some practices that worked well are –
Core and Electives:

- Best of n-x quizzes
- Sharing slides/reading material in advance
- Sharing recorded lectures. Though attendance seems to drop, overall it is beneficial.

Electives:

- Projects
- Communicating with students who do not regularly attend lectures/may not have performed well.
